

## CONSENT TO PERFORM ERBIUM LASER PEEL TREATMENT

PATIENT: \_\_\_\_\_

DATE: \_\_\_\_\_

### **PURPOSE**

LaserPeel uses laser light technology to remove sun damage spots, perform skin resurfacing, treat mild to moderate wrinkle reduction as well as treatment of atrophic scars.

### **PROCEDURE**

You will be asked to remove any makeup you are wearing. Photographs will be taken for documentation. Multiple treatments may be necessary to achieve complete satisfaction or in conjunction with IPL photorejuvenation. Short-term redness can be expected along with mild to moderate peeling of the skin in 2-5 days.

### **EXPECTATIONS FOLLOWING TREATMENT**

Most patients will experience mild discomfort. Mild erythema (redness) and edema (swelling) should be noticed in the treatment area and can last a few hours to a few days. You may experience a mild sunburn sensation accompanied by a tight dry feeling in the treated areas. A few days after treatment some flaking may occur. Do not remove the flaking skin as it may lead to scarring or poor healing. Continue to follow the skin care regimen offered by your laser kit.

### **RISKS/DISCOMFORT**

**Discomfort** – You may feel a slight amount of pain during treatment. The pain is mild and results from the heat produced by the flash of the laser pulse. Some areas are more sensitive than others.

**Healing Wound** – A mild sunburn-like sensation may be experienced. Immediately following complete treatment you may apply cool compresses. Following the cold compresses you may apply a soothing cooling ointment liberally over the entire treatment area.

**Crusting or Oozing for 2-5 days following treatment** – Depending on the power level and number of passes, over the treatment site crusting or oozing may occur. UVA/UVB sun protection lotion should be applied on the area daily. If blistering or burns occurred during treatment, aggressive wound treatment should be administered.

**Pigment Changes** – In some patients the treated area loses pigmentation (hypopigmentation) and becomes a lighter color than the surrounding skin or may increase in pigmentation (hyperpigmentation) and become darker in color. This is only temporary. This type of reaction tends to gradually fade away over a period of 2 to 4 months.

**Eye Exposure** – There is a risk of harmful eye exposure to laser energy. Safeguards will be provided by the use of safety eyewear during the laser treatment and must be worn at all times to protect your eyes from accidental laser exposure.

### **QUESTIONS**

A member of the Center for Dermatology & Skin Cancer staff has explained the nature of the procedure and its alternative treatments, and the benefits to be reasonably expected compared with alternative approaches and your questions were answered. If you have any other questions about this procedure, you may call us at (630) 964-2000. This document is written confirmation of this discussion.

**CONSENT**

You have read this form and understand it. You request the performance of the procedure(s) described above. You have been given a copy of this consent form. Your consent and authorization for this procedure is strictly voluntary. By signing this informed consent form, you hereby grant authority to perform Erbium LaserPeel Treatment.

The nature and purpose of this procedure, with possible complications, have been fully explained to your satisfaction. No guarantee has been given by anyone as to the results that may be obtained by this treatment.

I agree to have photographs taken for documentation as well as teaching and research purposes, as well as for possible use in publications.

I have read the consent and certify that I understand its contents in full. I have had enough time to consider the information and feel that I am sufficiently advised to consent to this procedure. I hereby give my consent to this procedure and have been asked to sign this form after my discussion with Center for Dermatology & Skin Cancer staff.

**POST LASER PEEL INSTRUCTIONS**

**General Skin Care**

Proper skin care is important to protect the new refreshed skin and aid in the progression of treatment. Your Physician or Laser Technician will discuss the proper skin care regimen following your treatment.

1. Clean the treated area with **RejuvaDerm Post Laser Cleanser**. This formula gently cleanses away surface debris and is non-irritating.
2. Follow with one-two pumps of the **RejuvaDerm Post Laser AntiOxidant**. This Green Tea (antioxidant) and hyaluronic acid (Moisturizer) act as an anti-inflammatory and have a calming effect to the treated area.
3. Finish with a small amount of **RejuvaDerm Post Laser Moisturizer w/ SPF 30**. This seals in the anti-oxidant serum, assists in the acceleration of the healing process, and enhances wound recovery. The SPF protects the new skin from harmful UV rays.

I have read and understand the above Post Laser Peel Instructions.
